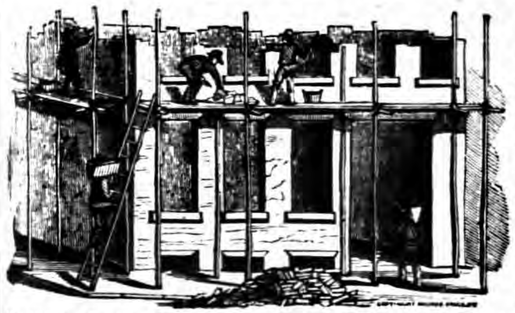
TROJAN BRICK MACHINE.



This Machine grinds its own clay, and after pressing the clay into the mould, pushes out the mould by a new process, and neither mould nor machine will break, should any obstruction get in the mould. When obstructed by a lump of hard clay, stick, stone, or any other foreign substance, it will relieve itself immediately, and when so relieved, it will be ready to go on with its work without any throwing in or out of gear. This Machine leaks no mud, the plunger being packed by a new process. *All other Machines used in making Brick from tempered clay will leak mud.* By an entirely new arrangement, the sander on this Machine has a longer time to put his mould in the machine than in any other, thus avoiding all possibility of breaking moulds—a great cause of annoyance in other machines. One span of horses and eight men can make from 20,000 to 25,000 good bricks per day. David Ralston, with twenty men and two boys, last season made 2,800,000 bricks, by horse power. The year before, with the Hall Machine, on the same yard, and with the same number of men, only 2,200,000 were made. The difference in the number of brick manufactured in one season, as above shown, will pay for two of the Trojan machines—besides making better brick. This Machine makes no wedge brick.

PREFACE.

However short the time may seem to be since the issue of our 1878 edition of the Troy Directory, a full year has passed, during which the usual changes have taken place, making this the fifty-first number of the Directory a real necessity, and that of 1878 of but little more practical use (as the figures below illustrate) than a last year's almanac.

It is with pleasure that we are again able to announce a large increase of names in this edition over that of last year, because it gives conclusive evidence of two important facts: *First*, of the thoroughness with which we have performed our labor of collecting the names, etc., and *Second*, although assertions to the contrary have frequently been made, there is no doubt of the fact that Troy has rapidly increased her population during the past year. In the Troy and Lansingburgh department of the Directory, we have this year 2,059 more names than were in this department last year, and this increase was found mainly within the limits of Troy proper, which number, according to the usual estimate (to every four inhabitants one name will appear in the Directory), will give an increase of population in Troy since May 1st, 1878, of about 8,236 people. That the local business interests of our city have this year a decidedly better out-look, is perceptible to every one who has carefully viewed the matter. The iron interest has received an impulse that has given encouragement to the mercantile community generally, and it is to be hoped that the dawn of increased prosperity has come to remain permanently with us.

The much-vexed and long-delayed water question has been definitely settled by the adoption of the engineer's report, which, when the work is completed, will give us for many years to come an ample supply of pure and wholesome water for domestic and all other uses.

The first bank failure in the history of Troy occurred in October last, which, for a time, caused quite an excitement among the leading business men, and its affairs are now in the hands of a receiver, who must necessarily close them up at a sacrifice to both the depositors and stockholders of the once famous Merchants and Mechanics' Bank of Troy.

For several years past we have annually made a record of the deaths among those whose names appeared in the first Troy Directory, published in 1829. Since our last issue the following have died, viz.: Leonard McChesney, Bela Barber, Calvin Hayner, George M. Tibbitts, Lyman Bennett, James S. Keeler, Ira Whitaker, George B. Warren and Joseph Snedikor.

Our complete set of Troy Directories are frequently consulted for information by our patrons, and much of value to them is obtained which cannot be had from any other source. We shall continue, with pleasure, to give the use of these volumes to all patrons who may wish to consult them.

We wish to call to the notice of our patrons one important fact, viz.: every time that we publish a new edition of the Directory, and charge for it only the same price per copy that was charged for the issue of the previous year, we do what is fully equivalent to making a reduction in the price, for the reason that we give more for the same amount of money, a larger book, containing more names and more miscellaneous information throughout the book. If our patrons could purchase a loaf of bread this year weighing a pound and a quarter, for the same amount of money that they were last year required to pay for one weighing only one pound, they would at once realize the fact of a reduction in the price; but when the same principle is applied to the Directory, they, for some unaccountable reason, almost invariably lose sight of the fact of a reduction having been made. Until we stop building annually more stores, dwellings and other buildings, and we cease increasing our population, the cost to us of collecting, compiling and printing the materials which go to make up the Directory must necessarily be annually increased, and, therefore, it cannot fairly be expected that we shall annually continue its issue *very* many years in succession without increasing its price per copy. We have always kept the price of this publication below that charged by others for similar works, and it is still our aim to continue in this; but we think it very unreasonable in those of our patrons who expect us to produce a first-class Directory and sell it at a price too far below that charged by others for works which are far inferior to this.

Our advertising pages have steadily won their way to the front rank, and we assure all who avail themselves of this department, that no pains will be spared on our part to merit their continuance. We not only print these pages in the finest style of the art, but we this year print the names of all advertisers, in the general department of names, in large, full-faced type, in addition to the small capital type used for their names in the classified business department.

We return thanks to all who, as advertisers or subscribers, have continued their generous support, and we also acknowledge the courtesy with which the people generally have responded to the many questions from our canvassers.

Changes made in Compiling this Volume.

	Troy and Lans.	*Cohoes.*	*West Troy.*	*Total.*
Number of Names in Directory of 1879	20,866	5,228	4,452	30,546
Number of Names in Directory of 1878	18,807	5,075	4,417	28,299
Increase from 1878 to 1879				2,247
New names added in preparing the Directory of 1879				6,725
Names erased in preparing Directory of 1879				4,478
Changes in location, etc				8,483
Whole number of Additions and Alterations in preparing this edition				19,686

Of the 30,546 names contained in this issue, only 10,860 are to be found in our edition of last year without some alteration. By comparing these figures it will be seen that on an average only 35½-100, or abou. 3 to every 9 of the names in this edition now remain correct in that of last year. How much more reliable is a last year's Directory than a last year's Almanac?

STREET DIRECTORY,

Giving the name of each street, and showing what other streets and places run from it or across it with the number at which they intersect.

From this list, the location of any number on a street can be easily ascertained; as, for instance, wishing to know at what part of Second street No. 168 comes, you look at Second street, on page 13, and find that Liberty street crosses at 156, and Washington street at 178, showing that 168 Second street would come half way between Liberty and Washington streets.

This Company owns the entire water-power of the Mohawk River at Cohoes, embracing the celebrated Cohoes Falls. Aggregate fall, one hundred and twenty feet, giving nearly ten thousand horse-power. The Company's gatehouse and dam are among the finest structures of the kind in the United States.

The canals are so constructed as to give a succession of falls from one canal to another, varying in height from twelve to twenty-five feet. The power is leased by the Company, with land for factory buildings, in perpetuity, at an annual rental of about twenty dollars per horse-power, and considering the locality, is the cheapest in the country. It is an unfailing power, and during the past few years, while most of the water-powers in the country have failed for a time, Cohoes has had an abundant supply, without one minute's stoppage. About one-third of this magnificent power is unappropriated, and appurtenant thereto are some of the finest factory sites to be found anywhere.

Cohoes is situated at the confluence of the Mohawk and Hudson rivers, about four miles from Troy and ten from Albany, and is eligibly located with reference to New York and other markets, and possesses superior advantages for transportation to market, either by river, canal or railroad, having two canals and two railroads running through it. It is a thriving young city of nearly twenty thousand inhabitants, and contains some of the finest cotton and other factories in the United States.

The waters of the above springs are put up in Pint and Quart Bottles, and packed in good order for shipment to any part of the world. Pints in boxes of four dozen each, and Quarts in boxes of two dozen each.

They are also shipped in Lawrence's Patent Reservoirs (Barrels lined with pure Block-Tin) from which they are dispensed by our customers at their counters precisely as they flow from the springs, without being recharged with gas.

Dr. Fordyce Barker, of New York, says of the EXCELSIOR WATER:

I make great use of the various Mineral Waters in my practice, and I regard the "Excelsior" Spring Water of Saratoga as the best Saline and Alkaline laxative of this class. Sparkling with Carbonic Acid Gas, it is to most persons very agreeable to the taste, and prompt in action as a gentle Diuretic and Cathartic.

FORDYCE BARKER, M. D.

The Water of the UNION SPRING acts as a Cathartic when drank before breakfast; while, at other times during the day, it is a very agreeable and healthful beverage.

From ALFRED L. LOOMIS, M. D.

Professor of the Theory and Practice of Medicine in the University of New York. President of the New York Pathological Society, etc.

During my whole professional life I have been accustomed to use freely the Water of Congress and Empire Springs. About six months since, accidentally, I was furnished with a few bottles of the "Excelsior" Spring Water, and found it so much more agreeable to the taste and pleasant in its effects than either Congress or Empire Water, that I have since used it myself, and recommend it to patients requiring a gentle Cathartic and Diuretic.

A. L. LOOMIS, M. D.

ANALYSIS OF THE UNION SPRING WATER.

LABORATORY OF THE SCHOOL OF MINES, COLUMBIA COLLEGE,
New York, March 26, 1873.

The sample of Mineral Water taken from the UNION SPRING, Saratoga, contains in one U. S. Gallon of 231 cubic inches:—

This Water is of excellent strength. It is specially noticeable that the ratio of Magnesia to lime is unusually large, which is a decided advantage.

Directions to Key Holders.

Upon seeing a fire in your immediate vicinity, or having positive information of a fire near your signal box, unlock the door, and pull the hook all the way down and let go of the hook; then wait a few moments, and if you hear no ticking in the box or alarm on the bells, go to the next nearest box to the fire.

Never open the box or touch the hook except in case of fire.

Never pull the hook if the bell in the box is ticking.

Never give an alarm except from the box nearest the fire.

Be sure the box is locked before leaving it.

Never let the key go out of your possession, unless to some responsible person for the purpose of giving an alarm, or when called for by the Superintendent.

The number of the box signaling the fire will be struck upon the gongs of all the engine houses; also upon St. Paul's, St. Peter's, St. Mary's, St. Joseph's and St. Patrick's church bells. For example: To announce an alarm from Signal Box No. 24, the bells will be struck TWICE, and, after a pause of seven seconds, will be struck FOUR times, thus: 2—4.

The number of the box will be repeated at intervals of twenty seconds until a sufficient alarm has been sounded.

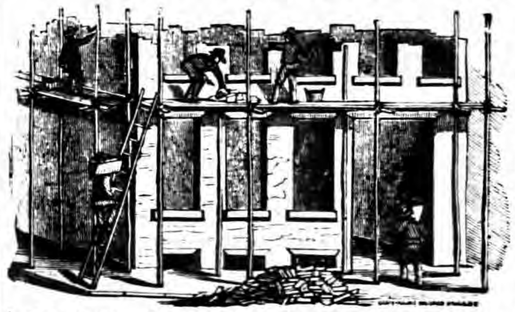
ALEXANDER FERGUSON,

BRICK MAKER,

Also Manufacturer and Patentee of the Celebrated

TROJAN BRICK MACHINE.



This Machine grinds its own clay, and after pressing the clay into the mould, pushes out the mould by a new process, and neither mould nor machine will break, should any obstruction get in the mould. When obstructed by a lump of hard clay, stick, stone, or any other foreign substance, it will relieve itself immediately, and when so relieved, it will be ready to go on with its work without any throwing in or out of gear. This Machine leaks no mud, the plunger being packed by a new process. *All other Machines used in making Brick from tempered clay will leak mud.* By an entirely new arrangement, the sander on this Machine has a longer time to put his mould in the machine than in any other, thus avoiding all possibility of breaking moulds—a great cause of annoyance in other machines. One span of horses and eight men can make from 20,000 to 25,000 good brick per day. David Ralston, with twenty men and two boys, last season made 2,800,000 bricks, by horse power. The year before, with the Hall Machine, on the same yard, and with the same number of men, only 2,200,000 were made. The difference in the number of brick manufactured in one season, as above shown, will pay for two of the Trojan machines—besides making better brick. This Machine makes no wedge brick.
